

# Streamlit Setup and run

## ONE TIME ENVIRONMENT SETUP

1. Step 1 - Create an env and setup Streamlit there -> Why do we a virtual env itself? (So we don't want to disturb existing env - base setup - so you create a virtual partition..

1. Virtual Env using Conda:

1. **Creating a Conda env:** conda create -n StreamlitRFenv python=3.11 (Program partition folder!)

2. **Activate the Environment:** conda activate StreamlitRFenv

```
(base) laxminarayan@Laxminarayens-MacBook-Air StreamlitApp % conda activate StreamlitRFenv
(StreamlitRFenv) laxminarayan@Laxminarayens-MacBook-Air StreamlitApp % █
```

3. **Deactivate the Environment:** conda deactivate

4. **To install Streamlit:** pip install streamlit

5. **Recursively install requirements.txt:** pip install -r requirements.txt

6. **Automated way to port your requirements:** pip freeze > requirements\_base.py

2. Step 2: Create an app.py file and try running it from the env

1. command: streamlit run app.py
